

INSTRUCTIONS

SÁKBE ROAD FOAMCORE MODEL

1) Print pieces A through M.

2) Cut out pieces C through I. Use them as templates to cut out matching pieces of foamcore. Glue pieces C through I to their matching foamcore pieces, printed side out.

NOTE: Use Elmer's ??? glue. Apply the glue as thinly as possible; too much glue will cause warping, and could ruin the model.

3) Cut out pieces A and B. Use them as templates to cut out matching pieces of foamcore. Discard the paper pieces A and B; only their matching foamcore pieces will be used in the model.

4) Glue A to C.

NOTE: Refer to the Exploded View to see where the glue goes. Use Elmer's Wood Glue Max. At each step, only apply the glue that is needed for that step.

5) Glue B to C.

6) Glue D to A, B & C.

7) Glue E to A, B & D.

8) Glue F to A, B & E.

9) Glue G to A, B & F.

10) Glue H to A, B & G.

11) Glue I to A, B & H.

12) Cut out pieces J through M. Score each of these pieces twice, as indicated.

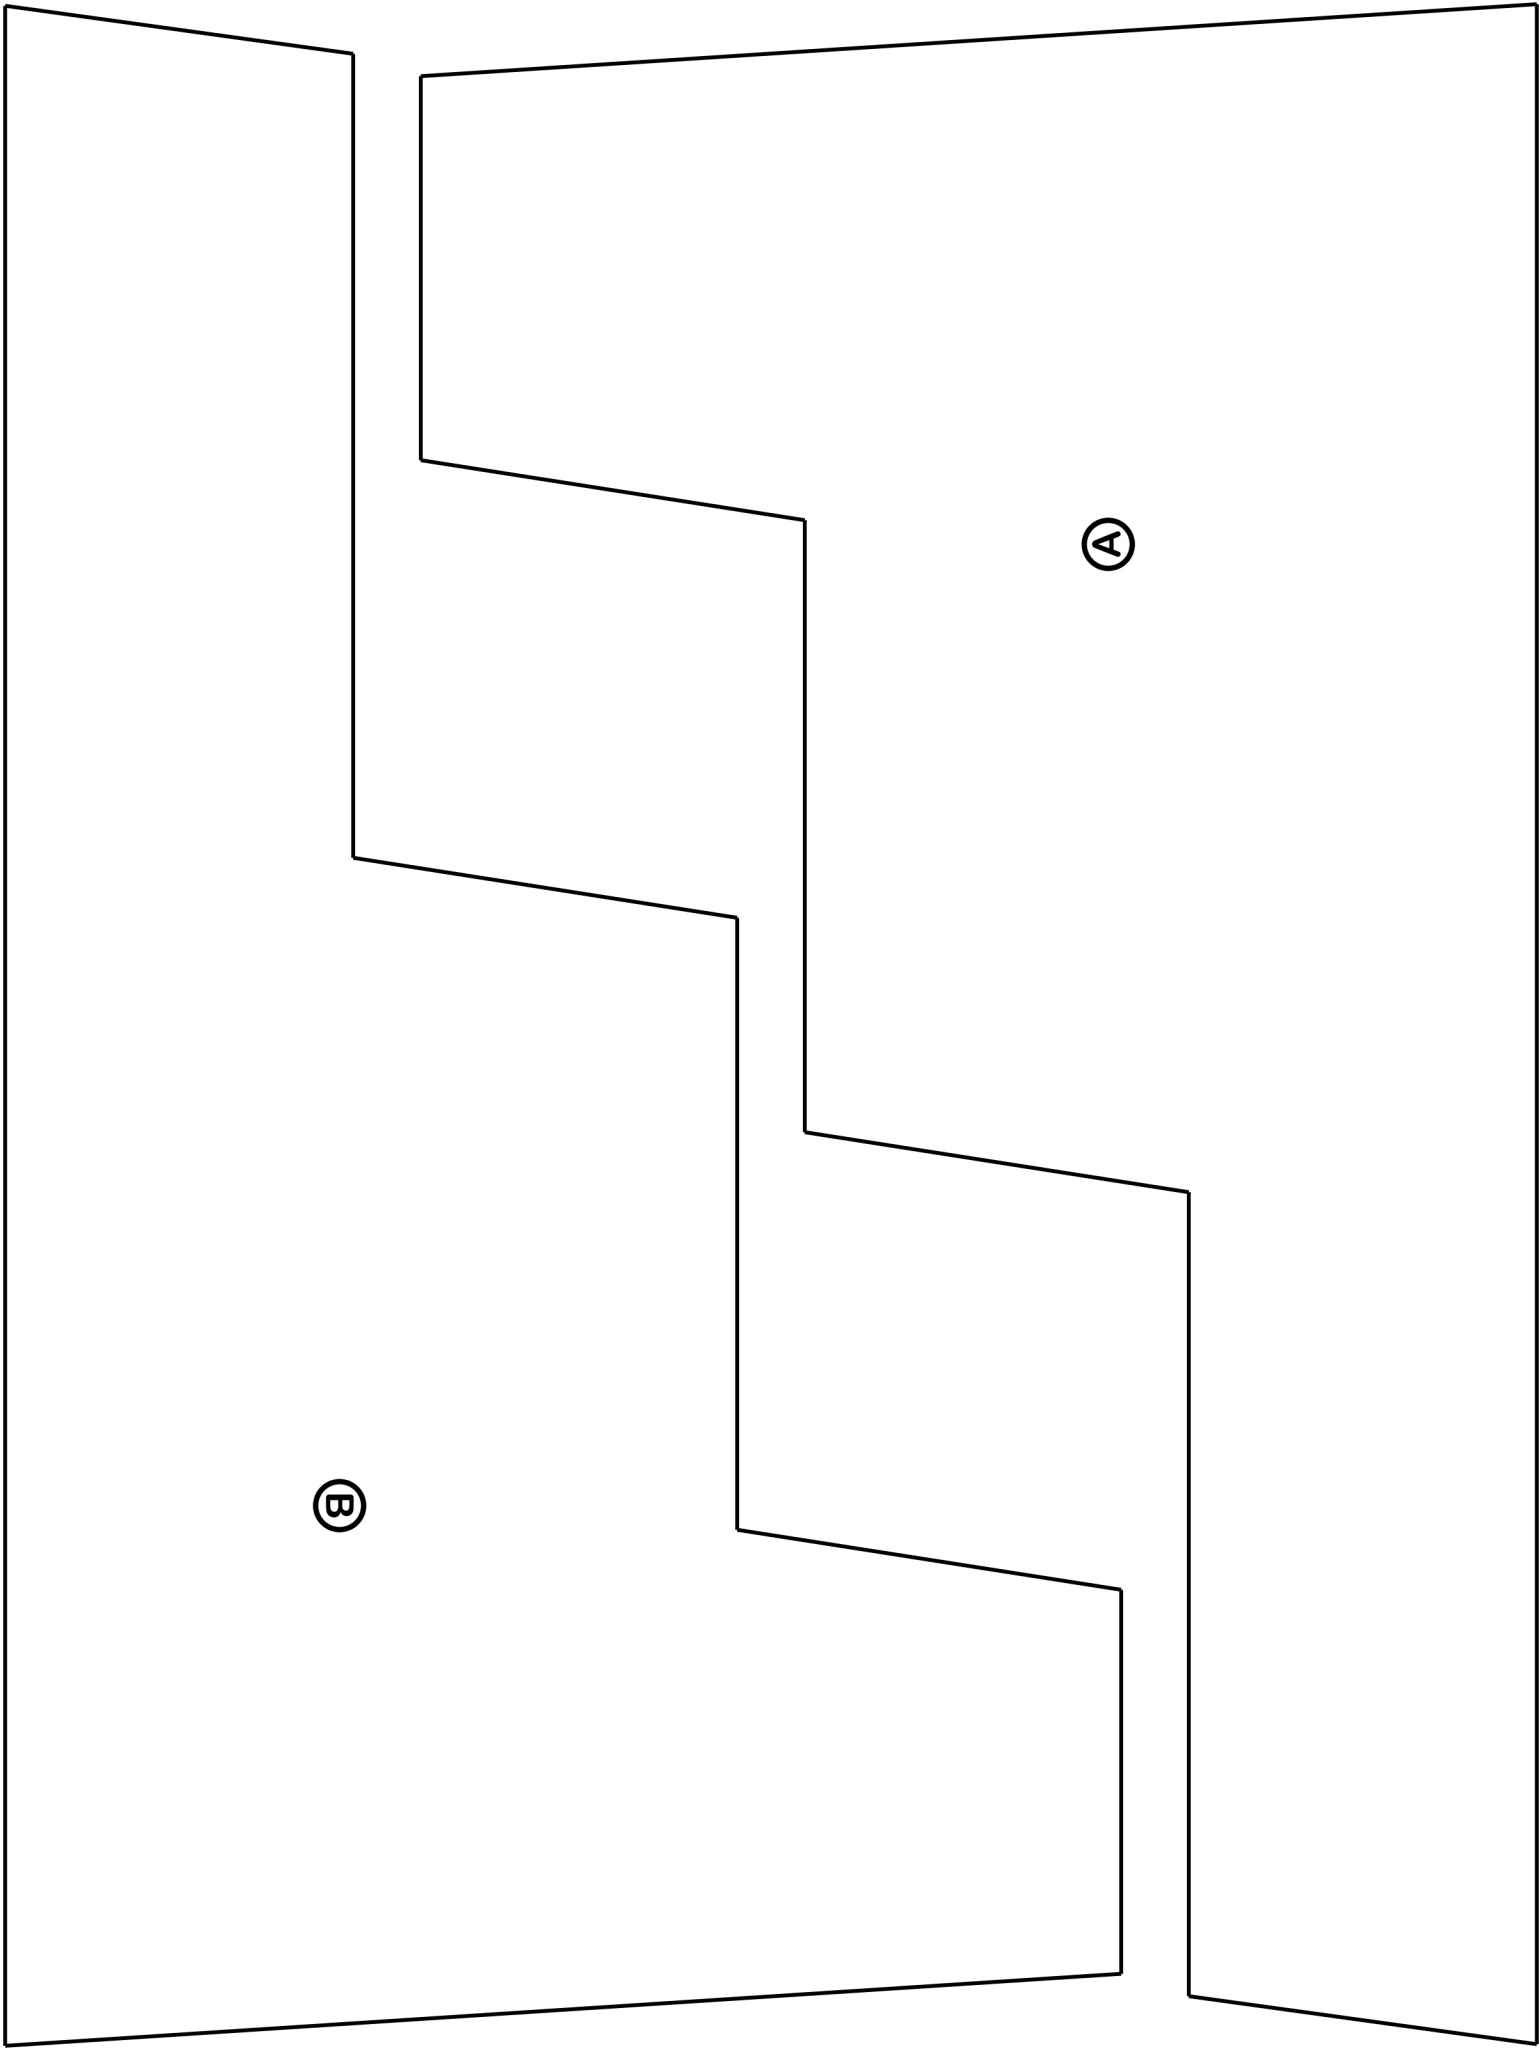

13) Glue J over the exposed top of C. The 'wide' side of J should face inward, toward piece D.

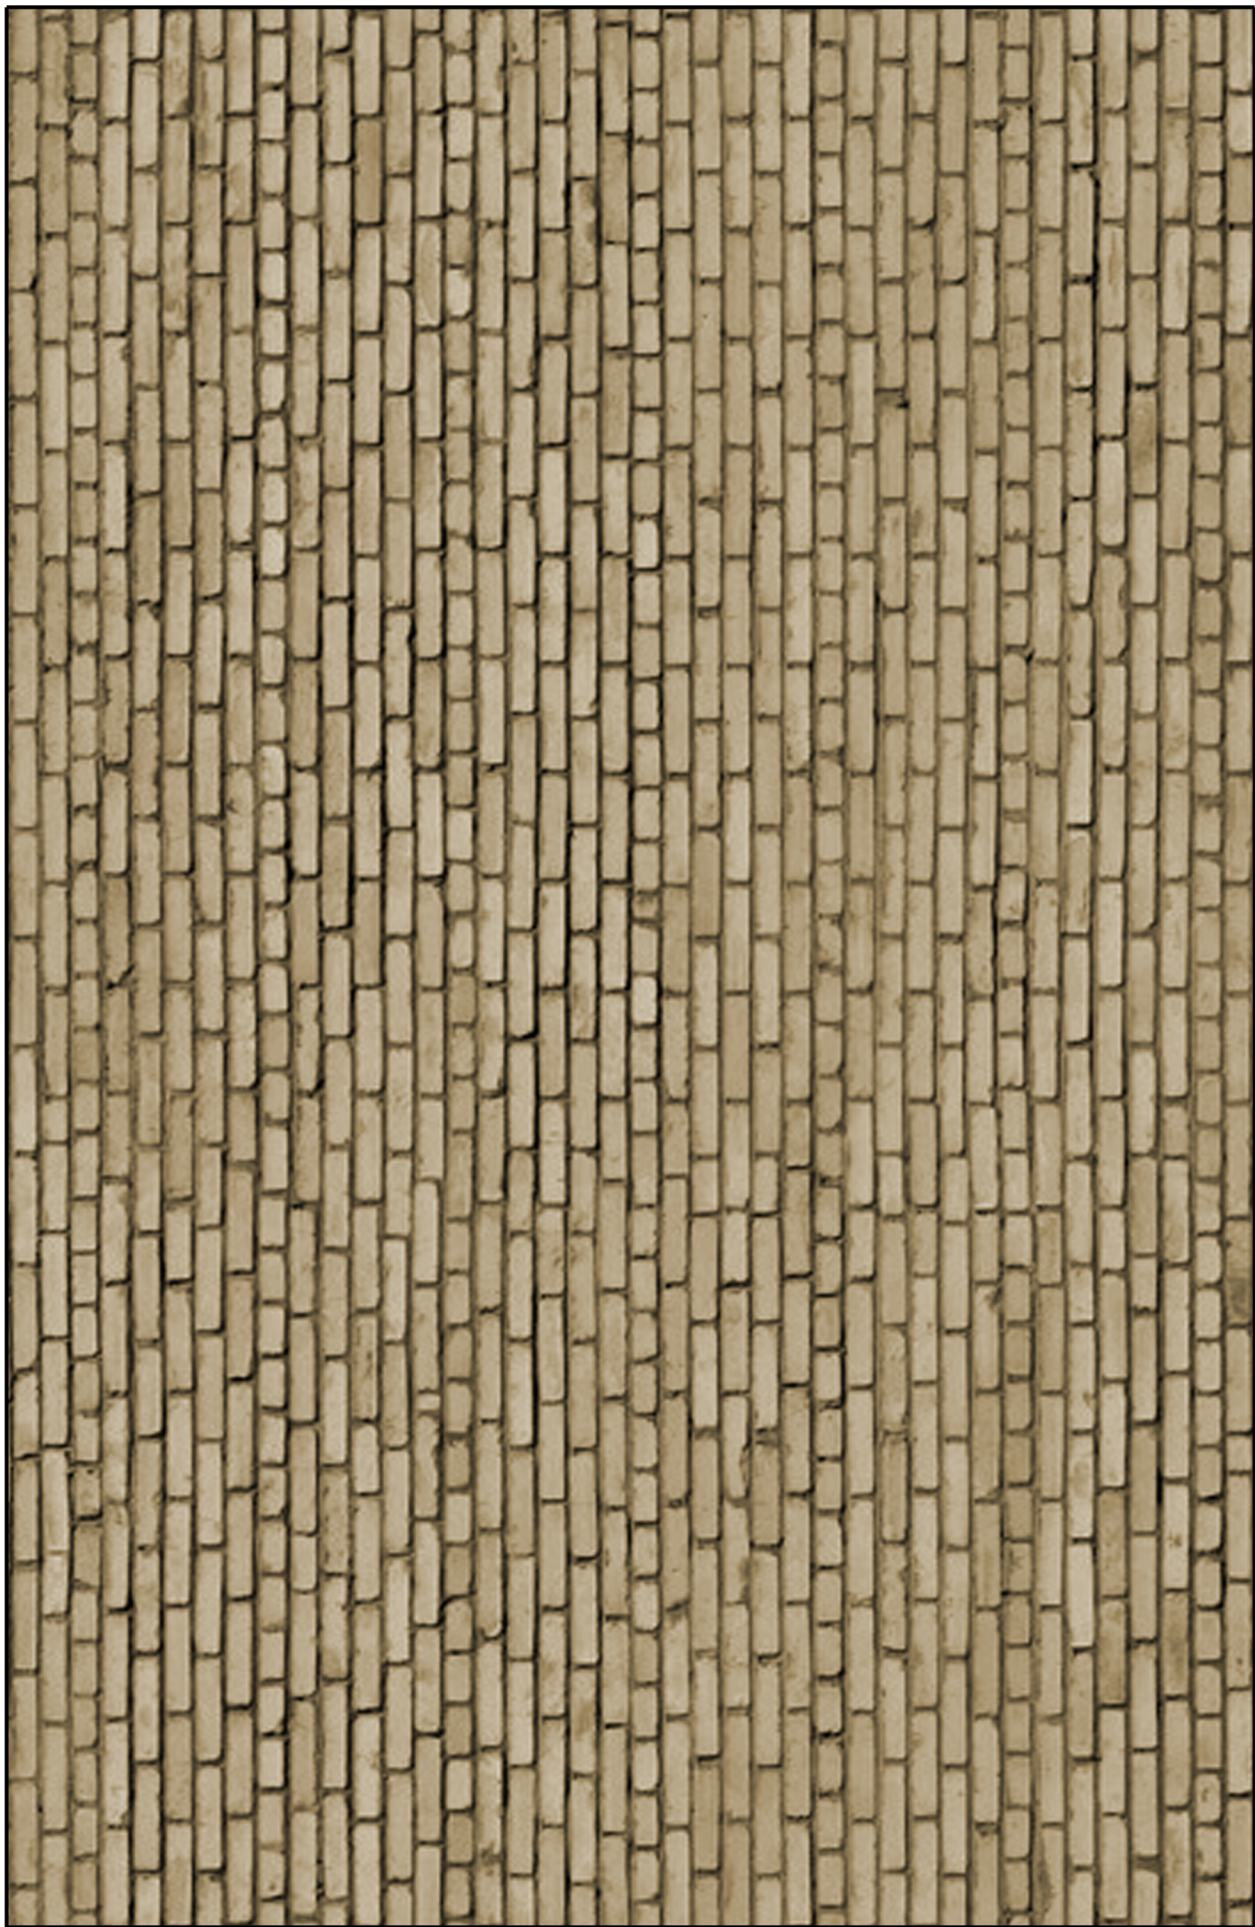

14) Glue K over the exposed top of E. The 'wide' side of J should face toward piece D.

15) Glue L over the exposed top of G. The 'wide' side of J should face toward piece F.

16) Glue M over the exposed top of I. The 'wide' side of J should face toward piece H.
